

Our Environmental Policy

NORTEGAS Energía Distribución SAU, NED España Distribución Gas SAU, NED Suministro GLP SAU, Nortegas Energía Grupo, S.L.U. and Nortegas Green Energy Solutions, S.L.U.

as energy companies engaged in energy distribution, consider the conservation and improvement of the environment one of the essential components of our strategy. We believe that it should form one of the pillars of an effective environmental protection policy. For this reason, we have established the following principles of environmental conduct, which we are committed to upholding. We pledge to provide all the material, human and economic resources it takes to carry them out, and endeavour to use these resources in a sustainable manner.

1. Protect

Incorporate principles of environmental protection, respect for the environment, pollution prevention and environmental management throughout the value chain, ensuring that all stakeholders take steps to protect the environment.

2. Raise Awareness

Provide training and information and increase awareness among personnel regarding the impact our activities may have on the environment, promoting environmental awareness both within and outside the company.

3. Listen

Take stakeholders' expectations into account in environmental processes by communicating with the community and the authorities in a transparent manner, providing information on our environmental efforts and promoting conduct that is respectful of the environment among our customers, suppliers and other stakeholders.

4. Comply

Comply with, and urge strict compliance with, environmental legislation as well as other environmental requirements we deem appropriate, both in our own activities and those we have the capacity to influence.

5. Improve

Encourage continuous improvement in our environmental performance by establishing improvement objectives that are compatible with the context of our organisation and incorporating results-oriented environmental criteria in processes.

6. Check

Carry out environmental audits as a monitoring tool to assess whether our Environmental Management System complies with established requirements in order to ensure that expected results are achieved.
